

Some things in  
life need colour

ARTEVIA™ EXPOSED  
Concrete

*Artevia*™  
THE ART OF CONCRETE

ARTEVIA™ EXPOSED IS A DIVERSELY AESTHETIC RANGE OF THROUGH COLOURED READY MIXED CONCRETE COMBINING A DECORATIVE EXPOSED AGGREGATE SURFACE FINISH. ARTEVIA EXPOSED ENHANCES THE ARCHITECTURAL AND VISUAL APPROACH OF CONCRETE AND OFFERS THE DESIGNER A BROAD PALLET OF VISUAL POSSIBILITIES BOTH IN TEXTURE AND COLOUR.

Artevia Exposed offers a near endless blend of integral coloured pigment and aggregate combinations to suit any design requirement or decorative effect.

Artevia Exposed is placed using conventional methods before a surface retarder is applied to delay the set of a thin layer of paste on the surface of the slab. Once removed using a pressure washer it creates a decorative yet functional effect of exposing the aggregate in the surface of the concrete.

The naturally skid and slip resistant surface finish is durable and free from aspects of vehicle rutting.

The low maintenance surface provides a great alternative to paving, asphalt or other decorative solutions whilst the durable finish will ensure a long lasting high quality finish is maintained throughout the life of the concrete.

**ARTEVIA EXPOSED CAN BE USED TO CREATE IMPACT AND DESIGN FEATURES IN A MULTITUDE OF DIFFERENT APPLICATIONS INCLUDING:**

- industrial, commercial and domestic flooring
- civic monuments and surrounds
- roads
- pedestrian walkways
- communal areas
- footpaths and cycle tracks
- parking areas and driveways.
- sea frontage/sea defence
- tram networks
